

Recommended Due Date for Calibration

Model: SDM3055

Serial NO.: SDM35FAC4R 0024

SIGLENT has determined that the factory calibration of this instrument is not significantly affected by storage of up to 180 days before first-time use. Cal Interval should start at the time the unit is placed in service or 180 days past the "Date of Calibration" on the certificate received with the unit.

Determine the date when the next cal is due (refer to the examples shown below)

Example 1: *First-time use of the instrument is **less than** 180 days after DATE-TESTED.*

Date tested at Factory: June 17, 2019

Example Calibration Interval: 1 Year

First-Time Use of Instrument: September 2, 2019

First-Time Use + Calibration Interval = Date for Next Calibration

September 2, 2019 + 1 Year = September 2, 2020

Example 2: *First-time use of the instrument is **more than** 180 days after DATE-TESTED.*

Date tested at Factory: March 22, 2019

Example Calibration Interval: 1 Year

First-Time Use of Instrument: October 10, 2019

Date Tested at Factory + 180 Days + Calibration Interval = Date for Next Calibration

March 22, 2019 + 180 Days + Calibration Interval = September 19, 2020
